---

whatever you are currently trying to call the setIcon on. A: The problem may occur if you define custom components in your xml layout. Try to remove the custom component from xml layout and add the icon programmatically. To set the icon programmatically set the setIcon method as follows: myButton.setIcon(new ImageIcon(getClass().getResource("myicon.png"))); I found this information in: Q: Wordpress - iframe post redirects page to root I'm using wordpress with a custom theme on www.testster.com. I have a landing page and want to embed a post on the home page. Here's what i have so far
