## Crystal Ball Software Crack 11

/1/2013 accumulate to 30 on 11/1/2013 My goal is to get this result: I can't get it by doing this  
rs.open "select \* from mytable where year(date) = 2013 and month(date) = 11 and day(date)  
= 1" I have tried this but without success do until rs.eof rs.next accumulate to 30 on 'date' loop

How can I do it? A: The INSERT INTO statement isn't meant to do that, because it is an  
UPDATE statement. Use the UPDATE statement to update your table with all the records  
that you have in your SELECT statement. You can modify your SQL statement to this:  
UPDATE mytable SET accumulated = 30 WHERE year(date) = 2013 AND month(date) = 11  
AND day(date) = 1 If you have other columns in the UPDATE statement you will need to add  
them. Also, if you need the date column in your SELECT statement just use it in the  
UPDATE statement instead of setting it in the SELECT statement.
