KEYMACRO is a visual programming language for developing user interfaces, or skins, for any Windows component. The

generated skin is ready for deployment immediately. It uses Visual C++ and all the resources required are added to the project. The code is pure text and is directly compiled to ensure a clean and portable package. The result is a solution ready to be deployed directly in the target application. KEYMACRO is a macro language that is easy to learn and lets you produce the final skin in a few minutes. It offers a user-friendly environment that is integrated with Visual Studio, so that it can easily be used. Besides, it has many functionalities that you can exploit to create complex skins. You can develop skin for any Windows component, from Text Box, Combo Box, List Box, Button, Picture Box, Toolbar Button, Tab, Sheet, List, Grid and so on. KEYMACRO makes things simple and easy. It offers a simple, yet powerful environment for developing skins. You will find all the functionalities that are necessary to develop skin that can be used immediately. ** The skin that KEYMACRO generates can be used in more than one application. ** It is also compatible with Visual Studio 8.0 and higher. ** The generated skin is compatible with visual studio 2012. Features: Key Macro - it is easy to use, but it has advanced features like "graphical editor", "syntax colors" and "code snippets". Skin Builder - it has all the features of the macro (graphical editor, syntax colors, etc.) to build the skin. Data and Skin Builder - with this module, it is easy to insert images, colors and data in the skin and it can be managed by different skins. Graphical Editor - it allows you to modify the graphic elements of the skin. Text Editor - it is a built-in text editor. Syntax colors - it enables the colouring of the elements in the code according to the functions or variables. Code Snippets - it provides you with different pre-defined code blocks that can be reused in your code. Smart Tags - you can use smart tags to create a shortcut for any function. Data Editor - it is used to add values, such as images, colors, data, etc. Ribbons - it is a plug-in that allows you to add ribbon components to your application. Thumbnail Maker - it can create small thumbnails for your skins. P
