Now the engine is a 302 and the tranny is an AC and both have been rebuilt. Ive replaced the coils, radiator and water pump. So now what else can I replace? Ive heard that since its an old Jeep the oil flow is probably low. The tranny has no dip stick, so how do I check the oil level? What is the oil doing to the temp gauge if it is low flow? I think the low oil would cause the temp to be cold, but I'm not sure. If the engine isn't running, and the gauge is displaying coolant temp, I would assume that it was the oil.
