Browse With Me is an Internet browser with a minimalistic design, a speed that is similar to that of internet browsers, a simple look, and a minimal set of features. The only thing that should be in your web browser of choice is speed. Browse With Me claims to be the fastest browser, and we can tell you that the speed is mostly just an illusion, and not really useful when it comes to browsing the Internet. We'll show you what we mean. Sponsored High Speed Internet Service Get your home connected to high speed Internet connectivity. A program that allows you to convert the information from a file from a Win-Situ data files into a CSV format. The program supports the data files from TROLL 9500, TROLL 9000, and miniTROLL models. Features: - Set column order of the original file - Build templates from which the data can be quickly transferred - Convert multiple data files What's New in this Release: - Fixed a critical crash related to data files with a larger number of readings What's New in this Release: - Fixed a critical crash related to data files with a larger number of readings Download Here If you have any problem using AutoCSV please write to us at support@cainsoft.com Visit our website www.cainsoft.com Thank you! Aws etc. may be more appropriate for your question. If you are asking if the same results can be achieved in all models of Win-Situ, then the answer is yes. Just be aware of the following: - Your CSS code is only supported in miniTROLL and 9500 - You can't save the log (echo, menu etc.) in TROLL 9000 and 9500. Please be aware that you need to install the CsvExporter plugin and to change the extension of the CSV files so that they can be loaded in Win-Situ. For details and configuration instructions please see the help file of the plugin. Thank you for your reply. As I stated in my original question, I'm looking for the possibility of converting the configuration data of a WIN-SITUSIAB2 into a CSV file. The reason for this is to be able to manage the configuration settings in a more comfortable way (as the CSV file) instead of the xml configuration files. Is there a possibility of that? Thank you again, Werner Using the configuration.cfg file you can change settings that cannot be changed through the GUI (for example the device family). Please look at the help file of the plugin you mentioned and ask any other questions about the plugin. Thank you If you want to be able to import the settings from a previous configuration, you'll have to export your configuration in the current configuration.cfg file to a previous one. The code for that is in the WinSituUiPlugin. You can find the corresponding help file in the help file of the plugin. Thanks,
