For every item there are two numbers. You choose an item. It shows the text and the number. In textview, the Textview should show the number of the item (5). But the textview should also contains the number (5) (and not the text of the item). How can i do this? A: There is a way to do this, but for now, I have found the easiest way is to copy the text in to a second textview. RALEIGH (WTVD) -- A new program is giving middle school students the opportunity to serve their community.The Youth Services Center of Central Carolina's (YSCCC) 'Work Studies' program is a 14-week, paid summer program where students earn a paycheck and help pay for their own expenses.Each student will be paid $400 per month. The program is free for the students.Through the 'Work Studies' program, students ages 14-16 will work for a community service organization. Students also get the chance to earn college credits while helping pay for their expenses.Interested students can register starting Monday at Central Carolina University's YSCCC."This is a good program, because it's about them. It's not about us giving them a job, it's about them earning their paycheck, as long as they want to get a paycheck," said Marcia Berndt, Director of the YSCCC.Students are paired with a mentor who is also a member of

A list may be finite or infinite. List : A list is a sequence. lists List : a. An ordered collection of things. b. The symbols that are used to represent an ordered collection of things. Types of lists Strictly speaking, not all lists are sequences. In particular, given a list with a first element, it is not always possible

to choose an element from the list to form a sequence (cf. non-choice theorem). List : An ordered sequence. List type : The type of lists, as defined by Curry–Howard. Examples Examples of lists list : A list. A list may be finite, infinite, or uncountable. list 0 : Finite list 0. list 1 : Finite list 1. List 0, 1 :: list 0. list 1, 2, 3, … :: list 1. list 1, 2, …, n :: list n. list 1, 2, …, ∞ :: list ∞. Cons list cons is not a function, since it evaluates into a list, not a function. list (cons 1 2) = 1 :: list 1. list (cons 1 2 3) = 1 :: list 1 :: list 3. list 1 2 3, 4 5 6 :: list 6. nth :: list $\rightarrow$ (list list list $\rightarrow$ $\mathbb{N}$) $\rightarrow$ $\mathbb{N}$ $\rightarrow$ $\mathbb{N}$ $\rightarrow$ $\mathbb{N}$ nth n [x1,..., xn] k = if i == 0 then k else nth (n-1) [x1,..., xi-1, xi+1,..., xn] k nth n
