KEYMACRO can be configured to perform actions on your keyboard. It provides a very comprehensive set of macros, one of which you can assign to a key combo. For example, you can assign a macro to a key combo that performs a 2-click with the right mouse button. This action can be configured to delete selected text in a text document. You can also assign a macro to a key combo to open any program with a single mouse click. The program offers the option to display the current macro in the top status bar, to record the next macro to run when you perform a key combo, and to insert a shortcut to the currently running macro on the task bar. How it works A 2-click with the right mouse button will start a macro from your keyboard. You can assign any macro to any keyboard key combo. To activate a key combo, select it from the Macros list and press the assigned button. The Macros list is located at the top of the program window. Macros are evaluated in order. For example, the macro with the sequence Control-R will be executed when the Control key is pressed, the Meta key (Windows/Linux) or Command key (Mac) is held down and the Right mouse button is clicked. Thus, for instance, to open a file with a single click, you can create a macro that runs in this order: Control-R, Control-O. The Macros screen also allows you to delete any selected text, save it as a.txt file and send it to the Clipboard, and insert a shortcut to the currently running macro. Keyboard macro features •You can assign a macro to any keyboard key combo. •You can display the current macro in the top status bar. •You can record the next macro to run after you have performed a key combo. •You can insert a shortcut to the currently running macro on the task bar. Bottom line KEYMACRO is a freeware application that is quite user-friendly and quick to use. It allows you to create macros to perform various tasks. KYVIM Description: KYVIM is a utility designed to access the files and folders located on your hard disk through the KYVIM protocol and to perform the actions of the associated keyboard buttons.
