I just have always had it set that it is torrent limewire or gnutella or Q: Unable to push to github PR I am working on a project. My colleague is working on another project. We are both working on the same branch in Github. I tried to push to his branch using the command: git push origin master:xxxx I got an error message: error: src refspec master does not match any. error: failed to push some refs to I tried this before that: git remote prune origin When I cloned the branch from another computer, I got the same error message. A: You might want to read this post. At first, check your settings with git remote show origin (You might see origin already configured as a remote instead of origin/master. That's not a problem, you can work with both names as long as they match.) If you want to continue using the name origin, you have to remove the local tracking branch in your local repo: git branch -D master (If that fails, I suggest you read up on the difference between master and origin.) The ossuary iconography of the Tvishi, a Bronze Age (ca. 1750-1300 B.C.E.) settlement of 36 graves located on a terrace overlooking the Tabayron Valley in the northern Samar Project in Israel, has been studied intensively since its discovery in 1966. I will stay with my machine. The only thing I'm annoyed about is their lack of support for v4.0 TTS other than the games. I was impressed with the audio quality at the time of the new software upgrade, but I'm shocked that this feature has been abandoned. I'll be leaving the e-mail address I used in the old customer service center. The Tacx customer support is great! Very friendly and quick to answer any questions you might have. I have sent them an e-mail at the address on their website, and I'm looking forward to hearing from them. Is there any way to see this link and/or is my trainer missing from the home screen and instead I am now in trainer mode for my Samx Trainer? Can you help me with the link between my Tacx trainer to my PC? I am using the Tacx PC software on the version 3.6. I see that my Samx trainer is linked to my PC when I run Tacx trainer software, but I am using the newer PC software version on the v3.6 and I cannot see the Tacx trainer linked to my PC. I do not see a link to my Samx trainer on the Tacx PC software home screen. What can I do?
