

Nintendo released the console in September 1989. The system featured 32KB of RAM, 2 MHz Z80 microprocessor with 32KB ROM and a cartridge slot. The console featured eight controller ports and a built-in clock generator that provided the clock signal to all cartridges. The console required four AA batteries for power. It also featured a unique docking port with two connectors. One was used to plug the cartridge directly into the console's main power supply. The other was used to plug the controller, a scan line converter, and other accessories into the console. Instead of a QWERTY keyboard, the system was marketed with a new controller designed by Nintendo's long-time collaborator Hisashi Aoki. The controller had a set of four action buttons (A, B, Y, and X), six directional buttons (left, right, up, down, left joystick and right joystick), and a start and select button. The buttons were arranged in a diamond-shape, rather than a keyboard layout, which made typing easier. A prototype is kept in the R.
