I need to write a script that will check for duplicate user names. So... "DannieB": "DannieB", "DannieB": "DannieB" "Daniele": "Daniele", "Daniele": "Daniele", should output "DannieB": "DannieB", "Daniele": "Daniele" "Daniele": "Daniele" I am using this but it is not working properly `cat inputfile | grep -e "^[^]*": "^[^]*": "^[^]*" | sort -u` I am new to bash. Can anyone help me out? A: You can use `awk ' $1==prev{print $0} $1==prev{print prev}' inputfile` OUTPUT: "DannieB": "DannieB", "Daniele": "Daniele" Its working as follows: `$1==prev` prints the line if the first field, which contains the username, is the same as the previous one. `$1==prev` prints the previous line if the first field, which contains the previous username, is the same as the current one To get the output in ascending order do: `awk ' $1==prev{print $0} $1==prev{print prev}' inputfile | sort -k 1 -n` OR `awk ' $1==prev{print $0} $1==prev{print prev}' inputfile | sort -k 1,1n` OR `awk ' $1==prev{print $0} $1==prev{print prev}' inputfile | sort -k 1,1n -t,` Q: File transfer from iphone to android over 3G(Wifi), problems I have to transfer a big file(34 mb-51 mb) from an iPhone 5 to my android tablet. If I do it over wifi, the transfer is flawless, and I can even download the file(iPhone and Android). But if I take it off wifi to transfer over 3G(Wifi router connected to my phone), the iphone can't download anything. I mean, even iTunes will hang and the timeout d4474df7b8
