Feature-based Plug-in framework In the past AutoCAD's ObjectARX based API allowed programmers to make their own additions to the autocad code base. To do this they had to write a class that implemented the ObjectARX API. As a result, they could customize the way the program functions. The result of this change was a feature-based plug-in framework, in which any developer could make their own features. This allowed new functionality to be introduced without needing to wait for a major upgrade of AutoCAD. Supporting .NET Since AutoCAD 2007, AutoCAD has supported supporting Microsoft .NET, and now provides .NET libraries and code for some parts of AutoCAD. Integration with the Windows Desktop Windows Forms is AutoCAD's framework for interacting with windows and dialogs.
