A: The usage of Snort alert is as follows: Snort alert is an open source tool to send alert notification on the unauthorized network activity. It will take the trigger after detecting the specific usage of the unauthorized software. Open-source, Snort is one of the open source application which work in the peer to peer network (P2P). Snort alerts are generated when the source IP of the connection is on an unauthorized system. Snort is a packet filter, i.e. it works on the basis of IP addresses. On the other hand, Snort can also work on specific applications, protocols, and even specific file types. In this way, you will be get alert notification with the specific IP address. It should be remembered here that while you need to get the alert notification with specific IP address, the software on the particular IP address should not be the unauthorized software. It should be remembered here that software can also perform the activities which are unauthorized. In

this context, how to use Snort alert tool? Let us see the steps to use it: First of all install Snort alert application on the system Second, check if the system is the authorized system or not. After establishing the system as the authorized system, you must start the Snort alert application. Thus, you will get the alert notification about the system on which you are using unauthorized software. Snort alert is written in C++, one of the open source software. The tool will not work in your system if the Snort alert is not installed in your system. Download Snort alert from the following link: Homepage:- Snort alert is free for the trial basis, which means the trial version of the application that you can install in the system. But if you want to remove it from the system, then you need to spend $ 200 as the token amount. If you would like to see the process of using Snort alert, then it is described here. package containers import ("io" "io/ioutil" "net/http" "time" "github.com/docker/docker/api/types 1cb139a0ed
