If you're looking for a simple calculator that comes to the mobile devices you can check out the SimpleCalc for iPhone and SimpleCalc for iPad. From the developer: SimpleCalc is a simple, practical, handy and portable Java calculator that can be used on a variety of mobile platforms, including iPhone, iPad, iPod Touch and others.

Features • Calculates arithmetical functions: plus, minus, times, divide, square root, power, trigonometrical functions: cos, sin, tan • Allows to change the formatting of results • Allows to change the number of digits • Allows to change the size of the output number • Allows to change the precision of the output number • Allows to enter and display decimals • Allows to use external commands to perform additional functions • Allows to open external files using file select dialog and reads the contents of external files to be used inside the calculator • Allows to read the contents of external files directly from the content providers • Allows to check whether numbers are integers or real • Allows to check whether the numbers have a fraction • Allows to check whether the numbers are formatted using scientific or traditional notation • Allows to easily check the identity of numbers • Allows to easily check the sign of numbers • Allows to easily check the closeness of numbers to zero • Allows to input and output from files • Allows to use dialog boxes • Allows to use command line arguments • Allows to open files in the standard Java file dialog • Allows to save and reload workspace • Allows to store and recall last workspace (workspace can be opened and closed by using the red "X") • Allows to remember the last workspace using an extension • Allows to display multi-line input dialogs • Allows to modify text in multi-line input dialogs • Allows to get the clipboard contents • Allows to use a small icon to represent the numbers • Allows to use a small icon to represent the operators • Allows to use a small icon to represent the functions • Allows to change the size of the workspace • Allows to support rotation of the device • Allows to use multiple instances of the application • Allows to allow the user to press back to exit the application • Allows to allow the user to press cancel to exit the application • Allows the user to interact with the calculator using the title bar • Allows the user to open the preferences dialog • Allows the

Keyboard macro support. You can define keyboard shortcuts, press them to execute a specific action, and repeat the keystrokes to achieve more complex tasks. With KeyMacro you can add your own actions to easily perform some simple calculations. You can also execute a custom program using a script file. Description of examples: Add, Subtract, Multiply and Divide operations with operands entered on the keyboard. Ex: $4+7=11$, $8-4=4$, $2*3=6$

Record a macro with the name of the macro, the new value, the operator and the previous value. Press, release, repeat a key combo, modify the previous value, save the macro and repeat. Ex: "newMacro","3","-","4" Use the menu to open the script file. Include macros and run a macro. Ex: "newMacro","3","-","4" You can record macros from files using the menu. Simplified menus. You can define the menu with only the most needed options. Ex: "newMacro","-","4" You can add macro actions to the script file. Ex: "newMacro","3","4","+","6" Include macros from script files. Ex: "1","2","3","4","5" Use the menu to open the script file. Ex: "1","2","3","4","5" Easily activate the macro "1+2+3+4+5" using the script file. Ex: "1","2","3","4","5" You can run macros from the script file using the menu. Ex: "1","2","3","4","5" You can save macros from script files. Ex: "1","2","3","4","5" Include macros from script files. Ex: "1","2","3","4","5" You can use the menu to open the script file. Ex: "1","2","3","4","5" You can run macros from the script file using the menu. Ex: "1","2","3","4","5" You can easily save macros from script files. Ex: "1","2","3","4","5" Macros run in the background. Use the menu to open the script 77a5ca646e

SimpleCalc is a Java calculator that can be run on multiple platforms. It features a resizable interface and can be adjusted according to your screen size in order to easily access the calculator. Software Library LiteLive Ever wanted to enjoy all the benefits of a Windows Live account on your mobile phone and tablet? Well, now you can, and here's how: Based on the Windows Live platform, LiteLive is a highly functional and convenient way to manage your contacts, files, pictures, instant messages, Web services, etc, from your phone and tablet. LiteLive gives you access to virtually everything on your PC and provides you with a convenient way to synchronize all your files, settings and data between your PC and mobile phone. LiteLive has all the features you know and love in Windows Live. In addition, it has many innovative features that enhance the experience you have with your mobile phone and tablet, such as: Browsing the Web: Use your PC or tablet as a web browser. Create Contacts: Create multiple contacts with different personal information. Create Notes: Add notes, notes, and sticky notes. Create Email: Send email directly from your PC. Instant Messaging: Enjoy instant messaging with your friends from your PC or tablet. Email & Calendar Sync: Download your email from your PC and sync it with your phone and tablet. Find Friends: Search for and invite your friends via your PC or tablet. Gallery: View pictures from your PC or tablet on your phone and tablet. LiteLive for Windows Phone 7 Also available for Windows Phone 7 is LiteLive, the Windows Live-based application for your mobile device. Developed by PhoneFun Pty Ltd, LiteLive is a highly functional and convenient way to manage your contacts, files, pictures, instant messages, Web services, etc, from your phone and tablet. LiteLive gives you access to virtually everything on your PC and provides you with a convenient way to synchronize all your files, settings and data between your PC and mobile phone. LiteLive has all the features you know and love in Windows Live. In addition, it has many innovative features that enhance the experience you have with your mobile phone and tablet, such as: Browsing the Web: Use your PC or tablet as a web browser. Create Contacts: Create multiple contacts with different personal

What's New in the SimpleCalc?

SimpleCalc is a very simple calculator tool for anyone to use. It calculates basic mathematical operations, currencies, and even conversions and date calculations. You can easily use it on multiple platforms, and it can be used on a removable device without requiring installation. SimpleCalc Features: Advance calculation: SimpleCalc can calculate operations such as addition, subtraction, multiplication and division. The operations can be performed by specifying a range in which the operation should be performed. Date Calculations: SimpleCalc has the function to calculate and display dates, time, and time interval. Calculating Formula: SimpleCalc can also be used to calculate a formula with the specified variables. It does not require you to input your data in a table, but it requires a specified variable in order to be used. The variable is based on the next key pressed by the user, and it is changed when a different variable is specified in the equation. The calculation formula can be specified in the source code or saved to a text file as a string. Calculate Conversions: SimpleCalc can also be used to convert an amount to or from a specified currency. Money format: SimpleCalc can display currency with the specified number of decimal places. It can also be used to print the specified number of zeros after the decimal point, or the currency symbol (if specified in the source code). Currency format: SimpleCalc can also be used to display currencies with the specified number of decimal places. It can also be used to print the specified number of zeros after the decimal point, or the currency symbol (if specified in the source code). The operators are located on the left hand side of the equation, and their corresponding number is located at the right hand side of the equation. Operators: Addition: Plus Subtraction: Minus Multiplication: Times Division: Divide Modulo (Remainder): Mod Basic maths operations can be performed by specifying a range in which the operation should be performed. In addition, it can also perform basic maths calculations, as well as the operations that involve negative numbers. If the operation is performed in the range from 1 to 20, the calculator will display: 1 to 20 If the operation is performed in the range from 2 to 10, the calculator will display: 2 to 10 If the operation is performed in the range from 100 to 1, the calculator will display: 100 to 1 If the operation is performed in the range from 1000 to 1, the calculator will display: 1000 to 1 If the operation is performed in the range from -20 to 100, the calculator will display: -20 to 100 If the operation is performed in the range from 1 to -100, the calculator

System Requirements:

Steps to play: 1. Select your favorite team (ESL) in the first bracket. (note: top is red, bottom is blue) 2. In the next bracket, select your second team (iG) 3. In the next bracket, select your 3rd team (SKT) 4. Select your fourth team (KT) 5. Match starts in 1:00 mins

Generation of two-color femtosecond-pulse-induced frequency combs in BBO crystals.
