In this PUBG Legion Console Command Reference Guide I will teach you how to Use all the console commands to ease your gameplay. Use these PUBG Legion Console Commands for a faster gameplay. So let's get started. Some Command Explanation: In-game console commands are commands you give to the game, these commands can be useful to change game settings, bring back a fallen teammate, or even pause the game. There are a total of 8 main console commands. These console commands can be activated from the main menu. Some are default whereas others are available only after a certain mission or task has been completed. I will cover all of them in this video. For this video, we will be using the official Subreddit's guide to help us. So please follow the guides in the Subreddit and take screenshots of your console commands. That way I can get the list of the exact console commands you use. This is very helpful when doing a video like this one. So Let's get started. ** There are basically only two kinds of console commands. The first are the default ones. These commands are the same every game. So we will be focusing on the remaining 6. This includes for every console command, the shorthand, the command you use, the menu where you use the command, and a picture of what the console command does. ** An example of a console command is the "map change" command. we use the SHIFT+F key to type in the command. Another example is the "r_hp", we use the E key to type in the command. ** Let's get to it. 1. v_on -This is the command to toggle the V-Sync. When the V-Sync is on, the game will run at 60 frames per second. When the V-Sync is off the game will run at 30 frames per second
