If you're a seasoned CAD user who is looking to upgrade, we've written more tips on how to learn AutoCAD. Why learn AutoCAD? The standard set of materials that you use when creating a model in AutoCAD include the following: Drafting Units: The drafting units available depend on the CAD program you're using.

AutoCAD's default is millimeters, but you can change this to other units

such as inches or centimeter. You can also specify the size of a drawing unit to create a layout or measurement unit.

in the UK in 2011. Eye trauma is a common presentation in accident and emergency (A&E) departments in the UK and is often sustained in the face of road traffic accidents. Accurate management of such patients will help reduce the risk of vision loss. The National Institute for Health and Clinical Excellence (NICE) guidelines were recently published and are available on the NICE website. The

following is a brief overview of the national data on the management of eye trauma in the UK. To provide a description of the demographic data and main presenting features of eye trauma patients admitted to Accident and Emergency departments in the UK in 2011. Descriptive. National Health Service (NHS) trusts in the UK. The National Trauma Audit and Research Network (NTARN) data on the management of eye

trauma in the UK were accessed via their website. Trauma data from various locations in the UK were linked. A total of 28,070 patients were admitted for ophthalmic care. Nearly 40% of patients (12,145) were admitted after blunt trauma and nearly 60% of patients (17,224) were admitted after penetrating trauma. Most cases of penetrating trauma occurred in the most deprived areas and nearly 1 in 4 of patients

(2,350) were transferred to other hospitals. The majority of eye injuries were managed by an ophthalmologist or an optometrist. Injuries of the globe accounted for almost 20% of cases (4,895). The vast majority of injuries occurred in the male population. Paediatric and elderly patients accounted for 5.6% and 4.1% of admissions, respectively. Most eye injuries result from low energy events. The

eye was most commonly injured as a consequence of blunt trauma. Most eye injuries were managed in hospitals, and almost 2 in 3 patients were transferred. There is a need for further research in eye trauma, particularly in the paediatric population, in the management of penetrating trauma and in low-energy injuries. Skiatoki, New Zealand Skiatoki
