---

The above is the button shown in the login page when I try to log in. Both the login screen and the main login page use same theme. It's not the login theme either as the login screen theme has all the needed buttons (add, edit, manage, cancel, add page etc). The same theme works for other pages and not just login. When I try to log in with my web browser (firefox), I see my username and my password on the login screen. Once I type in the password and click ok, I get redirected to the main login page. Once I type in my username and my password there, I get redirected to the page where the error occurs. I don't see any error messages anywhere. The backend is build on Laravel 5.8 and the frontend is built on AngularJS 5. The application works fine on all pages except for the login. I am using Laravel passport for authentication. Thank you very much in advance for any help on this! A: I was able to fix this issue by following some steps which I found on here and here. After following these steps I was finally able to log into my application. The changes were: Disable SESSION\_DRIVER=file at /etc/php/7.2/fpm/php.ini Add the following lines in /etc/php/7.2/cli/php.ini session.entropy\_file = /dev/urandom session.entropy\_length = 32 Edit /etc/php/7.2/fpm/pool.d/www.conf and add these two lines cgi.fix\_pathinfo=1 cgi.force\_redirect=0 Edit /etc/php/7.2/fpm/conf.d/suhosin.ini and set the following configuration suhosin.executor.includePath = "/usr/local/sbin:/usr/local/bin:/sbin:/bin:/usr/sbin:/usr/bin" Edit /etc/php/7.2/fpm/conf.d/suhosin.release and add the following lines suhosin.memory.limit = "128M" suhosin.executor.includePath = "/usr/local/sbin:/usr/local/bin:/sbin:/bin 54b84cb42d
