Animation AutoCAD uses the Dynamic Input Manager to control all animation-related commands. Autodesk Inventor Autodesk Inventor is a reverse engineering platform for non-destructive geometry-based simulation of products and systems. It allows the simulation of mechanical properties such as weight, torsion, vibration and flexural loads. It uses an approximate physics-based simulation that models product behavior and can be used for static and dynamic analysis. It has been used in the design of ships, construction of bridges, mining equipment and other systems. Mobile applications Autodesk developed the AutoCAD mobile app for iOS (Apple) and Android. This app runs on the mobile operating systems iOS and Android operating systems. The application also allows you to view and edit your AutoCAD drawings. AutoCAD Mobile was developed to bring the full power of AutoCAD directly to your mobile devices. The initial release included the standard AutoCAD products and is free to download and use. In the United States, Canada, and Mexico, the app requires a monthly subscription to use, which is billed annually at \$19.99. In the United Kingdom, the app is priced at £2.99 for the first month, then £12.99 for annual use. AutoCAD was also released for the Windows Phone in August 2011. AutoCAD Mobile is also available on the BlackBerry OS. Technical Field The present invention relates to a recording apparatus. 2. Related Art An ink jet recording apparatus is known as one example of a recording apparatus which records images and characters on a recording medium by discharging ink from recording heads. The ink jet recording apparatus discharges ink onto a recording medium by using recording heads (ink jet heads) which are arranged in a line and which discharge ink by the ink jet method (for example, JP-A-2006-204188 and JP-A-2008-208342). The ink jet heads are sometimes provided with a nozzle which is sealed with an elastic member (sealing member) so as to prevent invasion of dust into the nozzle. As a method for applying pressure to the ink and discharging the ink from the nozzle, a method of using a piezoelectric device or a method of using an electromagnetic device is known. Examples of the piezoelectric device include one in which a piezoelectric device is applied to a vibrating plate and deformed by deforming the vibrating plate (for example, JP-A-2001-267245), one in which a piezoelectric device is applied to a diaphragm, deformed by deforming the diaphragm, and a piezoelectric device is deformed (for example, JP-A-2005-176566), and one in which a piezoelectric device is applied to a flexible film, deformed by deforming the flexible film.
