Beau's Angel "Beau's Angel" is a song by Australian singer songwriter, Amy Meredith, from her fifth studio album, *You Know What You Are* (2011). The song was released in Australia on 5 July 2011 as the album's third single. The song was written by Meredith, and produced by Matthew Gerrard, and was inspired by her daughter Beau. "Beau's Angel" debuted at number 94 on the ARIA Singles Chart and number 38 on the ARIA Digital Track Chart, but fell off the charts the following

week. Track listing Chart performance

This invention relates generally to radio frequency (RF) antenna assemblies, and, more particularly, to antenna arrays having reduced mutual coupling and increased radiation efficiency. RF communications are often implemented using an antenna array. Antenna arrays are often used for, e.g., multiple-input, multiple-output (MIMO) systems, phased-array antennas, and/or satellite antenna systems. An antenna array generally includes a

plurality of antennas, each of which may be used to transmit or receive RF signals. In an RF system, such as a MIMO system, a signal transmission to or from an antenna array is a vector of amplitudes and phases at various frequencies, and therefore, as described herein, the term “signal vector” refers to any such transmission. Mutual coupling between antennas in an antenna array affects the performance of the antenna array. For example, if an antenna in an antenna array couples with an adjacent antenna in the array, the two antennas will transmit a signal with

IguanaTeX is a PowerPoint addin that makes it easy to insert LaTeX equations into your presentations. The addin integrates easily with PowerPoint's ribbon, so it requires no additional learning. Just type the equation in IguanaTeX's dedicated tab and press the compile button to generate an image. Add any type of equation to your presentations with ease. Choose among six predefined equation types, including the standard algebraic formulas.

IguanaTeX Pricing:
Pricing is based on annual subscription. Pricing is discounted for purchases made during the course of the promotion and also for volume purchases. If you purchase this addin, you are eligible for automatic upgrade to the premium

version as well as all regular addin updates. Please also remember that your addin key will be valid for all versions of IguanaTeX, no matter how much you buy of it. [IguanaTeX] [IguanaTeX Description] [IguanaTeX Pricing]

UPDATE, 10/20/2014: IguanaTeX is free for one year, and it continues to function for all future updates. A: I use bookdown, but it is quite manual and hard to update or modify. A good idea is to extract LaTeX code directly from the LaTeX source file. A good idea is also to use PyTeX for the same purpose. But you will need to convert the.tex file to.pdf. If you have some LaTeX knowledge, you will get the idea of how to generate LaTeX directly from within R or Python. For

example, in R, you can use pdfTeX to create a LaTeX document from Rmd file (code). It is then easy to extract the TeX code from the pdf file. As you know LaTeX is a subset of TeX, but because LaTeX and TeX can produce the same document, you can use pdfTeX to extract TeX code. pdfTeX will convert the.pdf file to.tex and convert the.tex to.tex.dvi. You can then use pdflatex to generate the pdf file (see manual). So here's my first ever "Where am I?" since I started reading Crunchyroll. I originally tried to register with my Crunchyroll username since it's what I used to use to log into MyAnimeList. But there wasn't

The simplicity and ease of use of the addin lets you enter your LaTeX equations in PowerPoint and insert them as images in PowerPoint presentations. Simply type the LaTeX code into the LaTeX entry box, and click on the Compile button to preview it. If you decide it's good, select it and click on the Insert Image button to insert it in PowerPoint. Once inserted, you can edit the image as any other image in PowerPoint: change size, rotation, transparency, etc. To modify properties, simply select the image and select the property you want to edit from the ribbon

toolbar. The tool is also smart enough to detect changes you make in your LaTeX code and automatically re-compile your LaTeX equation. Therefore, you'll always have the latest code ready. Source:

Monday, 28 July 2017 What was the last

book you read and did you like it? So, I

finished The Bone Factory last week

(thankfully the first book in a set is the

longest so I didn't get too bored in the

middle, although I did wonder how long I was going to have to wait to find out what happened next!) Although I am technically in my last year of my degree and my school is giving away £1000 as a prize for the best dissertation, I've somehow managed to procrastinate from doing it until now. I'm trying to avoid having to tell my parents I didn't get a prize. Although it does mean I don't need to spend any more money on books! I love the cover, but as a reader I'm not sure that it really does justice to what is in the book. This is quite a dark book, so I did expect it to be darker than it is
