AutoCAD Crack+ Activation Code [April-2022]

Basic AutoCAD Skills AutoCAD uses the following layers to draw shapes: **Vector:** creates shapes by connecting lines. Vector art consists of points, vectors, and lines. Each point, vector, and line has associated information, such as color, size, and weight. **Raster:** creates shapes by drawing lines or fills on a raster (frame) that contains pixels. Raster art consists of pixels and fills, with each pixel having associated information, such as color, size, and weight. **3D:** creates shapes by connecting faces of 3D models. A 3D object has many faces that form 3D shapes. For example, a cube has six faces, each face being a 3D shape. **Viewing and Editing Layers** AutoCAD has several viewing and editing layers. **2D:** only raster objects are displayed and can be edited. **3D:** only 3D objects are displayed and can be edited. **Vector:** only vector objects are displayed and can be edited. **Color:** only color objects are displayed and can be edited. **Drafting Tools** Most draft tools are located on the Design ribbon, except for the History Bar which is also available on the Standard ribbon. **Home tab** Defines the default home for the Home tab. **Drawing Tools** Drawing Tools are where draft tools are located. Some draft tools are located on the Graphic editing ribbon, while other draft tools are located on the Graphic editing ribbon. **Drafting Tools Tool Category** **Text Creation** Text is created from text files. **Text Editing** Cuts, pastes, deletes, and aligns text. **Text Transformation** Changes the font, font color, font style, font family, and other properties. **Text Layout** Changes the line spacing, paragraph spacing, column width, and column placement. **Text Data Entry** Allows data to be entered into the current paragraph. **Word Mail** Email is created from the mail box. **Word Mail Formatting** Formatting can be applied to the text. **Text Size** Adjusts the font size. **Text Height** Adjusts the height of the selected text. **Text Baseline** Adjusts the vertical position of the baseline in relation to other lines. **Text Align**
