**Download**

FlexPave is the first computer-aided pavement design app, designed to help users create and plan their pavement design. Taking the process to a new level, it allows users to make adjustments to numerical data based on the graphical representation of their project. Through this, users can choose from two different reference-based methods for creating a new plan. When using the reference-based methodology, users can click the “Click to define” button and define various parameters in the base and

---

subbase (layers), as well as the design layers (veins and cracks) for their plan. With this, users can select all or several layers, and either completely change their thickness or adjust their values to a more customized number. This way, the overall look of the pavement design can be changed, making it more realistic. With that, the plan can then be saved for use. The most convenient feature is the ability to swap between different pavement plans with the “Swap” button, all while changing the parameters of the project. With the advanced planner, users can use it with GPS data, which

---

allows them to capture the location of the GPS points, define an area of the project to include or exclude.

Additionally, if a user needs to fine-tune their project, they can use the “Click to define” button on the screen, create a new plan and add the new parameters to the previous one. With that, the whole design process is streamlined, saving time and money while creating a high-quality plan.

Category: Utilities > GIS > GIS Tools  
Platform: Android The brand new app from SURF Software is designed to help you find and secure your private, public, or business WiFi networks,

---

allowing you to connect to them, configure them, and access a host of other settings without the use of a web browser. This app is designed to be an access point for your WiFi devices. It can automatically connect to networks (including open WiFi hotspots) as well as private, public, or business WiFi networks. It includes a host of useful features such as a secure password storage, toggle to control the connection between your device and the network, a VPN tunnel to add a layer of security when browsing the web, access to secured pages in both the browser and the native Android

---

OS, the ability to view the connection speed, information on the signal strength, device name, and more.

About SURF Software: Based in Redmond,

In the Engineering field, design automation systems are known to have a longer life. Keymacro is a tool to design, analyze and execute a project for the engineering industry. Features:

- ✓ Indent that separates design and analysis from analysis
- ✓ Road density calculations
- ✓ Rework by section
- ✓ Pipe and joint design and analysis

---

Calculate the fatigue life of the structure and design the structure ✓  
Relation of the reinforcement type ✓  
Relation of the thickness of the reinforcement ✓  
Design of the prestressing ✓  
A model that meets all the specifications ✓  
A user that can add what they need ✓  
Well documented ✓  
Easy to use and understand ✓  
Features designed in a standard way ✓  
Different reinforcement and reinforcement patterns, ensuring a wider range of support ?  
A wide range of analyses  
The analysis provides a range of function such as the fatigue life,

---

reinforcement thickness, load and stiffness. ✓ When you design the structure, you can not only make a plan but you can also know how the reinforcement will behave when subjected to heavy loads, which will certainly bring durability to the structure. ✓ Based on the experience of the people in the field of the application of engineering, you can go through the functions and functions performed so that you can design the structure you want. ? You can add reinforcement The design and analysis tool is user friendly and is designed so that you can add reinforcements as you

---

see fit. You can go through the functions and functions performed so that you can design the structure you want. ? Data saving for the design and analysis You can save the design and analysis using data saved in the application which you can find under “Save analysis or design”, “Load design” or “Save design”. ✓ Retrieve analysis from the saved data The design and analysis is stored under the saved data which you can retrieve it and analyze the design and analysis you saved. ✓ Analysis of joint reinforcement The analysis is not limited to the reinforcement type you

---

added, you can also conduct a joint analysis to complete the design and analysis of the reinforcement. ?

Various reinforcement types The reinforcement type can be determined by selecting the component. ✓

Engineering analysis and design

Analysis is not limited to a particular engineering field, you can also conduct an analysis of the reinforcement, the joint reinforcement, prestressing and other components that you think

Planning a new road or highway can go beyond the obvious, 2D route setting as there is a myriad of subsequent factors and characteristics that need to be accounted for. When looking at the substrate structure for any given road or highway, things can get complicated really quickly. FlexPave was designed specifically for dealing with the methods and procedures presented in the AASHTO Pavement Design reference manual and it will provide users with the means of creating and editing a pavement structure plan, with

---

customizable graphical and numerical parameters. A purpose-fit interface that uses the most out of the graphical representations of the pavement substrate. The main working principle behind the app's functionality relies on the use of graphics for depicting the actual pavement structure. This is done in accordance with the principles and parameters presented in the AASHTO documentation. Indices such as sub-grade CBR, growth rate, design life or AADT are just some which can be defined right when initiating a new project. Further, more advanced parameters can also be tweaked.

---

Create a pavement design, customize it into detail with parameters such as design lane or deviation and save it for later use. Using three depths as the main areas for parameter customization, the app allows users to define a specific set of characteristics for the surface layer, base course and sub base. A nifty graphical representation is met with a slider that controls the scale, which can be useful when trying to change perspective. A specialized app that deals with the intricacies of planning and executing the substrate and pavement for roads and highways. Regardless if you're an

---

engineer trying to develop the plan for a new highway or you're just learning about the particulars of pavement structure design, this app can help you perform an advanced pavement planning process. How to use FlexPave: Saving and sharing a design is as simple as sharing a file. Just as with the website, a design can be downloaded and saved as a ZIP file for later use or for online editing. In order to view and edit the design plan, users must connect their phone to their computer. Once connected, users can use the application's basic functionality. Users can work on the

---

design in two ways. On one hand, the app provides users with the means to create a design plan using the graphical representations of the pavement structure. On the other hand, users can change or edit existing plans using an advanced configuration interface that allows for easy manipulation of values through numerical sliders. Performing an advanced image

**What's New in the FlexPave?**

---

**System Requirements:**

**Minimum: OS: Windows 7 64-bit /  
Windows 8 64-bit / Windows 8.1  
64-bit / Windows 10 64-bit Processor:  
Intel Core i3 2.6 GHz / AMD  
equivalent Memory: 4 GB RAM  
Graphics: Nvidia GeForce GTX 760 /  
AMD equivalent DirectX: Version 11  
Network: Broadband Internet  
connection Storage: 5 GB available  
space Recommended: OS: Windows 7  
64-bit / Windows 8 64-bit / Windows  
8.1 64-bit / Windows**
