In the 1990s and early 2000s, AutoCAD released several major updates, including AutoCAD LT in 1999. This new release primarily targeted users who needed to use and modify existing AutoCAD drawings. Another early release, AutoCAD XP, was designed for the home and hobbyist market. By 2013, Autodesk claimed AutoCAD had more than 50 million users, including more than 9 million designers, architects and other professional users. The company also claimed nearly 200 million AutoCAD drawings are created each year. In 2014, Autodesk acquired SketchBook Pro, Tintri and Convera, but the company lost \$40 million in its 2015 financial report. History AutoCAD R14 was the first version of AutoCAD released. The original intent was to allow users to create both 2D drawings and 2D diagrams. For the first version, AutoCAD was created to target users who wanted to create 2D drawings and diagrams using the native Windows application without having to buy specialized

CAD software. This included a drawing-creation function, which allowed the user to draw within an on-screen workspace. In 1982, Autodesk introduced AutoCAD as a complete CAD program to the business and hobbyist markets. AutoCAD was the first CAD program that was developed for the PC and ran on a system built around a microprocessor. This allowed the application to run without graphics hardware, which would have made the program more expensive. AutoCAD was released initially for Windows and Apple II. In the mid-1980s, AutoCAD was expanded to include support for the HP-98 and Sinclair ZX Spectrum computers, then in the market. The first version of AutoCAD, AutoCAD R14, was launched in 1984. It was released in December of that year and contained primarily basic drafting and design features. AutoCAD's market share within the CAD industry quickly grew and by 1986, over 800 employees worked on the product. In 1994, the first version of AutoCAD for Windows NT was released, which was initially capable of editing DWG and DGN files and printing to Postscript files. In 1995, AutoCAD for Windows 95 was released, which included the ability to print to paper and to PDF documents. The following year, AutoCAD was released for Windows NT and Windows 95.

User Interface Including the icon on the desktop, the ribbon user interface is the only part of AutoCAD which is not customizable. It is also the oldest part of the program, having been added in 1992 (LISP code). AutoCAD currently has two graphical user interfaces: a ribbon-based interface which was introduced with AutoCAD 2000 and a new "classic" GUI which was introduced with AutoCAD 2017 and runs as a legacy application under AutoCAD 2018. In the 2012 AutoCAD LT review, Graham Hill wrote that the application is very fast, especially on new hardware. Graphical users interface AutoCAD has a relatively old-style user interface. In 2012, Autodesk was developing a new "modern" interface for AutoCAD. The "modern" graphical user interface was introduced with AutoCAD 2016. According to Autodesk, this new interface was built to be the most human-friendly, including sliders and dials, and a mode called "smart guides". AutoCAD does not include the ability to completely customize the user interface, but there are various add-ons and downloadable templates for the desktop and toolbars. Since AutoCAD is a drawing program, an integrated tool palette is often an important component. CAD Studio supports the use of Windows palette files to replace the standard palette in AutoCAD. As of 2017, the software includes a visual object labeling system with an easy-to-use interface. In the current 2018

release, it can now include additional labels, right-click control for over-drawing and color-coded shapes in the drawing area. In 2018, a new feature was introduced: 3D support. This now includes a 3D modeling environment with tools for creating and editing 3D models, as well as viewing them in the 3D workspace. 3D models can also be used in combination with 2D drawings. It is possible to perform tasks like verifying dimensions, adding features, inserting components, moving them, and exporting them.

The 3D feature was a replacement for the previous 3D feature, which was introduced in 2006. The first release of AutoCAD 2008 introduced an implementation of Open Office's LibreOffice in AutoCAD. This application replaced the main CAD environment and allowed users to export drawings to formats used by other software, for example, they can view files in EPS format. It also includes a feature called "function extension" that

Comments First and foremost, congrats to Andy and crew for the way you have made me feel about myself with my art. I think everyone on this forum has enough dedication to their art to be able to accomplish this, and it is due to the fact you are willing to offer your services, as well as your encouragement and feedback, to any one who feels lost in this process. I am not that great of an artist, and I spend more time trying to learn how to draw, then actually doing any art, but it is more rewarding to me to be able to draw something beautiful that someone wants, then it is to make a perfectly detailed and graphic illustration, and that is where I draw my inspiration. After I posted the link to the site, I spent a good 15 minutes trying to figure out how to get the download link to work for me, as well as the option to see the progress, and was only able to see the pics of the tutorial in the website, which I still found a tad intimidating. I hope to be able to do this very soon. Thank you very much, your methods and patience are greatly appreciated, and I hope I am able to offer the same to others in the near future.Q:

System.Web.WebPages.Razor.Configuration.HostSection cannot be cast to System.Web.WebPages.Razor.Configuration.RazorWebSectionGroup A part of my website that uses a model binded drop down lists and displays them in a Razor view is failing to render. The view that is failing to render is coming from a controller that is an extension of my controller and also inherits from my parent controller. I am currently checking for the error like this: `@{ var item = ViewBag.Item; }` which is a property that I have in my model and is being used in the view to populate a drop down list. When the page loads this throws the error: System.Web.WebPages.Razor.Configuration.HostSection cannot be cast to System.Web.WebPages.Razor.Configuration.RazorWebSectionGroup The System
