Structure of the body in obesity. The total-body lean and fat tissue mass, and the number, volume and volume density of the total body cells, fat cells and body components were studied in individuals with different body mass indices and in well-nourished young people and to demonstrate that the shape of the body changes significantly with increase in body mass index. The muscle to fat cell ratio and the mean linear dimensions of the skeleton remain the same throughout the whole range of body mass indices and in the whole age groups. The concomitance of considerable body weight in the case of young people gives rise to multifarious factors influencing energy metabolism. The ageing process in itself results in diminished physical activity, and this is followed by a reduction in body cells and reduction in the body cell content, although this is less pronounced in the case of the fat tissue, which is preserved in the geriatric group. The authors found that the body cell content varied from 4,876 to 17,938 cells in the lean group and from 2,737 to 24,044 cells in the obese group, the volumes varying from 44.62 to 125.8 l and from 44.82 to 200.7 l, and the volumes densities varying from 0.273 to 0.90 and from 0.288 to 0.960 g/l, respectively. The results obtained here are in agreement with those obtained in previous papers published by the same authors." } and [Table 2](#BIO026561TB2){ref-type="table"}, we found that the 0.5 Hz stimulation created a more aversive rate than the 0.1 Hz stimulation in the late phase. We also found that the 0.5 Hz stimulation created a more aversive rate than the 0.1 Hz stimulation in the initial phase. Finally, in the reduced-salience condition, we found that the 0.1 Hz stimulation created a more aversive rate than the 0.5 Hz stimulation in the late phase. Some limitations of this study should be noted. First, the stimuli were presented via visual

Here's a pastebin of my code: A: It looks like you just have a typo on line 11 of list.erl, where you define process/2. I don't see why a named function called process/0 is taking in 3 arguments, so my guess is that this was meant to be another function, but the editor accidentally left out the argument list.
