A resonator is a device used to produce a high-frequency signal, such as an oscillator. A resonator generally includes a piezoelectric layer having a layer of a piezoelectric material that is set in direct contact with a metal layer through which a high-frequency signal is to be applied. The piezoelectric layer is thereby set in direct contact with the metal layer, so as to apply a high-frequency signal to the metal layer through the piezoelectric layer. The resonator produces a high-frequency signal based on a high-frequency signal applied from the metal layer. Recently, improvement in power efficiency has been a theme of development in high-frequency elements. 82138339de
