```
what I've done so far is $PSObject =  
[System.Management.Automation.PSObject]::new() $listOfScriptNames = @() for($i  
= 0; $i -lt 10 ; $i++) { $listOfScriptNames += get-command -name
```

`$script_names[$i] -state never }` But the script gives me an error `Get-Command : 'test' is not recognized as the name of a cmdlet, function, script file, or operable program. Check the spelling of the name, or if a path was included, verify that the path is correct and try again. At line:1 char:17 + for($i = 0; $i -lt 10 ; $i++) + ~ + CategoryInfo : ObjectNotFound: (test:String) [Get-Command], CommandNotFoundException + FullyQualifiedErrorId : CommandNotFoundException, Microsoft.PowerShell.Commands.GetCommandCommand A: If $script_names is an array of strings, you can easily do this with a plain old for loop: $script_names = "a", "b", "c" for($i = 0; $i -lt 10 ; $i++) { $script_name = $script_names[$i] Get-Command -Name $script_name } But if $script_names is an array of objects, you need to use the -ParameterX argument as described in the linked answer. $script_names = @() for($i = 0; $i -lt 10 ; $i++) { $script_name = new-object PSCObject -property @{"name"=$script_names[$i]; "state"=new-object psobject -property @{"my_property"="value_of_my_property";}} $script_names += $script_name } Get-Command -Name $script_name Hugh Shearer Hugh Shearer (June 18, 1923 - July 10, 2000)`
