Developed by Southnett, CAD-COMPO is a bundle of two Adobe Illustrator plug-ins known as the BPT-Pro and the EXDXF-Pro (which stands for EXtract, DXF extractor). CAD-COMPO Benefits: Packaged together, these two apps represent an excellent solution towards 2D-CAD and design workflow compatibility with Adobe Illustrator, which are major complaints about the latter. CAD-COMPO Detailed Features: There are two different apps bundled with CAD-COMPO. The first one is called the BPT-Pro and it has all the features you would expect from any general CAD software, such as precise dimensions and angles measuring tools, accurate text creation, circles and ellipses drawing, and so on. The second one, the EXDXF-Pro, is a DXF conversion plug-in that allows you to quickly open and edit AutoCAD DXF files. After you install both CAD-COMPO plug-ins, you should notice them on your toolbars and menus after launching Illustrator. CAD-COMPO Installation: Installation of CAD-COMPO is quite easy. In most cases, the process is really similar to the one you would use for installing any other Illustrator plug-in. Thus, we've provided in the following an orderly walkthrough of the steps that might take to install CAD-COMPO. Firstly, you have to download and install the CAD-COMPO plug-ins that we've mentioned in the beginning. Q: Close form when button is clicked I have this form and I have 2 buttons. If I close the form that would be ok, but also if I close any of the other options. This is my code:

```
private void button1_Click(object sender, EventArgs e) {
    button1.Enabled = false; button2.Enabled = false;
    panel1.Enabled = false; panel2.Enabled = false;
    mainform.Show(); } private void button2_Click(object
sender, EventArgs e) { button2.Enabled = true;
button1.Enabled = true; panel1.Enabled = true;
panel2.Enabled = true; Form1 form = new Form1();
form.Show(); }
```

Can anyone tell me how to make this, I

tried this but didn't work. A: Please write like this private void button2\_Click(object sender, EventArgs e) { button2.Enabled = true; button1.Enabled = true; panel1.Enabled = true; panel2.Enabled = true; form1.Hide(); } A: you can do it in the button click event. since all the buttons are the child of the same form, it's more logical to do it in the form event. private void button1\_Click(object sender, EventArgs e) { button1.Enabled = false; button2.Enabled = false; panel1.Enabled = false; panel2.Enabled = false; } private void button2\_Click(object sender, EventArgs e
