What's New In LocK-A-FoLdeR?

Have you ever logged into your Windows system and gone to a folder to open it, only to find out that your request is denied by a hostile-looking system? You can't deny that it can be annoying at times but a software solution for it has to exist. Of course, the easiest way to do it would be to configure every folder on your PC and find out which ones are safe to share, but, hey! Life is too short for that. You can also run a weird app that can lock anything but nothing can prevent you from staring at your screens or talking with your friends the whole day, unless you start sleeping. Yep, that's right! Fidget Free is here to prevent you from wasting time thanks to its ability to block anything, including the mouse, and prevent the user from doing anything for a certain amount of time. Lock-A-FoLdeR is a simple and elegant solution that can completely

lock anything on your local PC. It uses a password in order to unlock the hidden folders and it is very effective, as it doesn't access the data itself. It should, however, be noted that you need to keep it running in order for its functionality to kick in. The fact that it doesn't activate automatically only for the purpose of locking the selected folders is an additional advantage, as it doesn't hamper your PC performance. Once you're done with the installation, you don't need to do anything more in order for it to work. You can simply choose the folders you want to protect and Lock-A-FoLdeR will do the rest. While it doesn't have any options to play with, the program can be integrated into the Windows context menu. For example, you can lock the folder quickly if you type its name in the search box. Of course, it's a customizable feature that takes only a few minutes to do. The functionality of Lock-A-FoLdeR is very limited, as it offers protection against only a small number of activity. Nevertheless, it's a great way to prevent other users from accessing your essential folders and of course a software application designed to protect your system without running can't be this good. This is a powerful tool that works without the need of any manual operation and protects your vital folders from

System Requirements:
