* To access the Photoshop panels, choose Window⇒Workspace. You can also open the panel with the keyboard shortcut Ctrl+W (Windows) or Command+W (Mac OS). Figure 2-11 shows some key features of the _Photoshop Elements_ photo editor. Figure 2-11: The panels in _Photoshop Elements_ offer more features than you'll likely need. Changing the exposure on a scene Adjusting exposure by clicking the Exposure button (refer to Figure 2-10) is one of the most commonly used editing features because it's so easy. The Exposure slider controls the brightness or darkness of a picture and is controlled with a sliding cursor that you move as you change the slider's value. You can do this either in black-and-white or color images. In addition to adjusting brightness or darkness in an image, you can fix unwanted bright or dark spots or areas by using either of the Shadows or Highlights controls, which regulate the light and dark areas of an image. The Shadows slider reduces the light that's in the shadows, while the Highlights slider increases the light in the highlights. Figure 2-12 shows the Shadows and Highlights controls. The Exposure slider, Shadows slider, and Highlights slider work on a per-layer basis. So, if you adjust the values on the Background layer, the values on all other layers adjust accordingly. Figure 2-12: The Shadows and Highlights controls work on a per-layer basis to adjust light and dark areas of an image. Using the Spot Healing Brush The Spot Healing Brush tool can quickly and effectively blend areas of pixels from a single color into a spot in an image. The tool is most often used when you want to completely replace a portion of an image with a particular color. Clicking the Spot Healing Brush tool selects it, and it looks like a large paintbrush. The brush can easily cover an area that's up to 1,024 pixels across. You can click any color in the Color Picker dialog box to replace the pixels in the image, which makes the Spot Healing Brush perfect for blending colors in your images. (In fact, the Spot Healing Brush is a powerful tool to select colors in your images; see Chapter 8 for more information.) Figure 2-13 shows a sample image in which I added a portion of the red photo in the left image to the image on the right. I started by using the Spot Healing Brush to select

Effects of cationic polypeptide (polymyxin B nonapeptide) on the level of activity of endotoxins in animals. The effect of polymyxin B nonapeptide (PMBN, 10 mg/kg) on the level of endotoxin activity was studied. It was revealed that PMBN decreases endotoxin activity in animals (mice, rats and guinea pigs). The levels of endotoxins in both sera and blood were lowered to the control values within 2 hours following the injection of PMBN, and the activity of endotoxins in blood was lower than that in the sera. PMBN has a strong effect on endotoxins, and it is thought to be an effective agent for the treatment of endotoxemia. a s e 1 5) t o b a s e 9 . 3 6 7 6 W h a t i s - 5 a 7 7 (b a s e 1 4) i n b a s e 9 ? - 2 2 7 5 3 - 5 3 5 2 (b a s e 9) t o b a s e 8 - 7 3 2 1 W h a t i s - 2 1 7 4 (b a s e 9) i n b a s e 7 ? - 4 4 2 3 C o n v e r t - 1 0 3 4 (b a s e 1 5) t o b a s e 1 1 . - 2 7 8 4 W
