The Da Vinci Code (2006) Movie The Da Vinci Code Movie English Download The Da Vinci Code Movie Subtitles The Da Vinci Code The Da Vinci Code Movie. Free Subtitles for The Da Vinci Code Subtitles. The Da Vinci Code (2006). Full movie.Q: reading pandas DataFrame with json file I have a database containing the data of name, id and latitude and longitude. It's based on json format. I can read the data like this: import pandas as pd import json def get_data_df(file_path): with open(file_path) as f: data = json.load(f) df = pd.DataFrame(data) return df I would like to have this data in a DataFrame. I mean, do not create a new file with csv format. Just read the original one. However, the issue is that the file contains an array and I have trouble to read it. Json file: {"name":"elisa","id":5,"lat":"51.3652","lng":"24.3905"} {"name":"millard","id":1,"lat":"50.1732","lng":"30.0325"} {"name":"apple","id":2,"lat":"41.2167","lng":"22.3343"} What I expected to get is: name, id, latitude, longitude elisa, 5, 51.3652, 24.3905 millard, 1, 50.1732, 30.0325 apple, 2, 41.2167, 22.3343 I assume this can be done by pandas.but I'm having trouble to read the file as a dataframe. A: If I understand correctly, you want to read that data directly as a Pandas dataframe, then you have to first read the JSON file and then parse that (or other formats), as a single record: import pandas as pd df = pd.read_json('yourjsonfile.json', lines=True
