1. Technical Field The present disclosure relates generally to a spring compressor and, more specifically, to a spring compressor including a piston, a coil spring disposed between a valve and the piston, and a cylinder having a hole through which the piston is slidably inserted.

2. Background Information A spring compressor is known which includes a cylinder into which a piston is inserted for compressing a coil spring (see, for example, Japanese Patent Application Publication No. 2012-128145 (JP 2012-128145 A)). The coil spring is disposed between a valve and the piston. The piston is slidably inserted into the cylinder. The cylinder has a hole through which the piston is inserted. The coil spring has a first end which is in contact with the bottom of the piston and a second end which is in contact with the valve. The compressed spring acts to bias the valve toward the second end of the coil spring.

Q: Evaluate $\prod_{i=0}^{\infty} \left(1 - \frac{1}{4^i}\right)$ Evaluate $\prod_{i=0}^{\infty} \left(1 - \frac{1}{4^i}\right)$ I am not aware of a general formula to solve such products. In my specific problem, I am trying to evaluate the following: $\prod_{i=0}^{\infty} (1 - x^i)$ If we consider that $x = \frac{1}{4}$ then: $\prod_{i=0}^{\infty} (1 - \frac{1}{4^i}) = \frac{1}{2} \cdot \prod_{i=1}^{\infty} (1 - \frac{1}{4^i})$

Non-protein-coding RNAs and the most interesting discovery in the prokaryotes. In the last decades, we have become more aware that RNAs are not just transcribed to synthesize mRNA. Many RNAs are involved in multiple functions such as regulation of gene expression. These RNAs are called non-coding RNAs (ncRNAs), and they are grouped according to their length in small ncRNAs, sRNA, and miRNA and long ncRNAs, lncRNA. Due to the rapid development of sequencing and bioinformatics, great advances have been made in the study of ncRNA expression during evolution. The extensive research has reported that ncRNAs have crucial functions during bacterial growth and development. Moreover, ncRNAs not only participate in gene regulation, but also take part in stress response and anti-pathogen mechanisms. In the present review, we describe the functions of ncRNAs in prokaryotes.
