You get a whole page of stamps and a Paint program! It works with various computer graphics files including Photoshop, Paint Shop Pro, Corel Draw, and others. During the time it spent here, I have been using Stamp

Pad to create stamps. I have very nice stamps, and what more could you ask for? Here is an example of my work and the process: Now, Stamp Pad requires you to give it a background image. You're probably going to want to have more than

one background image, because it is designed to work with vector graphics software and not raster graphics software like Photoshop and Corel Draw. But here is a really important point to remember: You do not need a background image! You can use any

color or pattern for your stamp pad. So, choose a color and a pattern that you like, and continue on from there. But, the point of Stamp Pad is that you can save the stamps you make and use them as backgrounds or just randomly stamped into

another piece of paper. And if you're missing the ability to save backgrounds to share, don't worry. In the complete version, you can save templates and re-apply them to other documents. Of course, you can't save background templates, but you

can save stamps
and use them as
backgrounds.
Stamp Pad has a
very simple
interface. You get
a window with four
panes: one for
opening files, one
for color and two
for brushes. The
first pane is for
opening files. For
most graphics files
you are likely to

use, you will find that the image you are trying to open in this pane already has a file name that has a.psd extension. You will also find that you don't need to browse for an image, because you can directly select the file from the Open File pane. Click on a

file and Stamp Pad will open it in a new window and position it appropriately, at which point it will be a click away to do anything with it you like. The four panes of Stamp Pad are: -You can right-click on the canvas and choose Pan, Zoom, Capture and Copy.

-You can click and drag your image out of the window and drop it on a different position on the canvas. -You can click and drag the Select Brush onto the Paint program and paint with it. -The Paint program is exactly what you are thinking of: it has a standard

palette of paint brushes and color swatches. You can also
