opener: print line pass elif flag4: for line in opener: print line pass  
How can I do this using python conditionals? A: The method should  
be open if flag1, so it should be: flag1 = True flag2 = False flag3 =  
False flag4 = False opener = open('file.csv', 'r') if flag1: for line in  
opener: print line pass elif flag2: for line in opener: print line pass  
elif flag3: for line in opener: print line pass elif flag4: for line in  
opener: print line pass What happen is that open() call open if  
flag1, so in case flag1 is True, the loop will iterate over opener.  
Else, it is open() called if flag2, in this case flag2 is True, it opens  
the file if is.txt for reading. Q: C# Ar
